PROFILE

Analytics engineer building dbt models, Looker semantic layers, and GTM data products. Six years across fintech (Addepar, \$1T+ AUM platform) and B2B SaaS (Pave, Dorsia). Strongest in Salesforce/CRM data architecture, LookML semantic-layer design, and translating business questions into reliable, well-tested data assets.

CORE SKILLS

Data Modeling & Transformation: dbt, SQL (advanced), semantic-layer design, dimensional modeling, data quality testing

Warehouses & Cloud: Snowflake, BigQuery, Redshift; GCP, AWS

BI & Semantic Layer: Looker / LookML, Lightdash, Tableau, Hex, Retool

Languages & Tools: Python, SQL, Git

Product & Event Analytics: Heap, Mixpanel

GTM & CRM Systems: Salesforce, Gong, Outreach

Integrations: REST APIs, SFTP, webhook ingestion

EXPERIENCE

Customer Success Engineer | Pave

Apr 2025 – Present

- Technical implementation and analytics infrastructure for the compensation management platform: build and maintain Looker/LookML data models powering cross-team analytics for the Customer Success and Account Management organization; serve as LookML technical resource beyond own book of 30+ accounts (\$1.3M+ ARR).
- Designed and shipped a multi-source GTM data aggregation system in Python unifying Salesforce, Gong, Gmail, Google Calendar, and Rocketlane activity into a normalized JSON activity log, eliminating manual reporting reconciliation across the CSE team.
- Architected an internal cross-functional analytics concept integrating Gong call data from BigQuery with operational compensation data from a Prisma/MySQL store, identifying the ETL gap blocking unified GTM dashboarding.
- Resolved Salesforce relationship-field data modeling issues affecting active book-of-business filtering, correcting a propagating data quality issue in downstream GTM reporting.

Operations Analyst → Senior Data Analyst | Addepar

Aug 2018 – Nov 2024

- Built and maintained Looker/LookML data models on Snowflake supporting Product and R&D roadmap analytics; partnered with PMs and engineering leads to translate roadmap questions into reusable, governed data assets.
- Integrated product event data from Heap into the Snowflake warehouse and built the LookML layer exposing user behavior data to product and analytics consumers organization-wide.
- Led migration of legacy Periscope dashboards to Looker; identified and corrected SQL logic errors during migration that had been misattributing \$800K in revenue.
- Owned daily data verification across client firms representing \$1T+ in assets under management, including pipeline observability, data quality validation, and stakeholder issue resolution.

Lead Data Analyst | Dorsia

Jan 2024 – Aug 2024

- Migrated production analytics models from GCP BigQuery to AWS Redshift, redesigning warehouse architecture for performance and cost optimization.
- Built dbt semantic-layer models powering the BI tooling migration, establishing data quality testing patterns and modular model architecture.
- Reduced analytics request turnaround time by 90% through self-serve dashboards and standardized semantic models.
- Drove product insights influencing 10% increase in app engagement among power users and 14% increase in monthly recurring GMV.

Founder & Analytics Consultant | Websmith

Jan 2022 – Dec 2023 (independent)

- Designed and deployed production logistic regression models in Python for visitor conversion prediction across SMB e-commerce client sites; live inference on incoming traffic with train/test-split validation and per-client retraining pipelines.

EDUCATION & CERTIFICATIONS

University of Utah — B.S. in Finance, 2018

BloomTech — Data Science Program, 2019 • AWS Certified Cloud Practitioner
